Arkady Zalkowitsch

Senior Engineering Manager @ Commure | ex-Carta | MBA in
Business Management
Sunnyvale, California, United States

Summary

Engineering Manager with ~20 years in software and 10+ in leadership. I lead teams that sit at the intersection of product, operations and integrations, recently helping to shape an ERP-style operating model for PE firms and their portfolios at Carta, connecting onboarding, offboarding, document workflows and financial integrations to firm-level outcomes with unified experience.

Experience

Commure

Senior Engineering Manager
February 2026 - Present (4 months)
Mountain View, California, United States

Boba Joy

Investor & Advisor
November 2024 - Present (1 year 7 months)
Brazil

As a co-founder and strategic partner at Boba Joy, I focus on turning a great product into a scalable brand and operation. I lead brand positioning, store expansion strategy, and the overall vision of Boba Joy as a next-gen bubble tea micro-chain in Brazil.

I defined the brand vision, mission, and “second-wave” positioning, with a clear focus on real fruit, quality, and a family-friendly experience. On the digital side, I led initiatives to improve customer experience through our website and our rewards/loyalty app, connecting the physical stores with an ongoing digital relationship with our customers. I also built and supported the team responsible for operational standards (SOPs/POPs), recipes, and processes to ensure consistency and scalability across locations.

From a growth perspective, I co-led the expansion from 1 to 3 stores in just over a year, serving more than 12k customers and validating the model for

future franchising. I worked closely with the on-the-ground operating partner to improve store performance, cost control, and the end-to-end customer experience. In parallel, I developed the early franchise playbook including personas, positioning, and scalable processes, to prepare Boba Joy for broader roll-out and structured growth.

Carta

8 years 4 months

Engineering Manager

October 2021 - January 2026 (4 years 4 months)

Santa Clara, CA

I lead the Corporation Integrations engineering team at Carta, owning strategy and execution for HRIS and financial integrations, onboarding/offboarding workflows and internal tools that power the support experience. I also previously managed the Customer Success Engineering team during a period of rapid growth.

- Increased team delivery velocity by nearly 3× in 3 months by bringing AI assistants into the development process (scaffolding code/tests, streamlining reviews and incident response).
- Designed and implemented a unified business-identity workflow that reduced tool fragmentation for internal teams and simplified how customers and support resolve account and access issues.
- Partnered with Product, Customer Success, Delivery Ops and Finance to prioritize integrations and internal tooling as a portfolio of bets tied to outcomes such as TTV, ticket deflection and operational efficiency.
- Provided coaching and structure for EMs/tech leads around prioritization, stakeholder communication and decision-making under ambiguity, so more decisions could be made effectively without escalation.

Tech Lead Manager

July 2019 - October 2021 (2 years 4 months)

Palo Alto, CA

- Acted as a lead engineer for new business lines, establishing technical foundations for Public Markets, and LLC.
- Collaborated with cross-functional teams to translate complex business requirements into scalable systems.
- Provided technical leadership, mentoring engineers and unblocking projects as the company expanded.

Senior Software Engineer

October 2017 - June 2019 (1 year 9 months)

Rio de Janeiro

- Developed core equity features in Carta (e.g. regular/custom vesting schedule, and option exercises).
- Implemented natural language search capabilities, streamlining user navigation for entities and documents.
- Worked on the first initiative to domain decomposition in Carta to define the foundation (standards and services) for microservices.
- Contributed to doubling development velocity by improving team standards and architecture.
- Served as a technical reference, guiding code reviews and design clarifications for scalable solutions.

Zestt

Engineering Director

January 2018 - October 2022 (4 years 10 months)

Rio de Janeiro, Brazil

I led the development of an ERP platform for SMBs in Brazil, helping the company reach key growth milestones while scaling the engineering organization from 3 engineers to ~15 people.

- Managed 3 leads (2 engineering, 1 product) across multiple teams.
- Built a collaborative engineering culture across three cross-functional teams (warehouse, financials and integrations), with clear ownership, shared standards and predictable delivery.
- Defined and implemented a metrics framework to measure product outcomes and engineering performance.
- Led talent acquisition, tightening the interview loop (rubrics, case exercises, structured panel debriefs) to reduce noise in evaluations and improve the quality and fit of new hires over time.

Partiu Vantagens!

Head of Engineering

October 2015 - October 2017 (2 years 1 month)

Rio de Janeiro, Brazil

I led the Engineering Org at Partiu, partnering directly with the CEO to build and scale a rewards platform connecting residents, stores and property managers, while ensuring the technology roadmap matched the company's strategy and growth plans.

- Managed 3 teams (~12 engineers and 2 designers), balancing short-term delivery with the longer-term evolution of the platform and its integrations.
- Led the development of the main consumer rewards mobile app, the in-store POS for real-time reward validation, and the merchant admin portal for configuring discounts, campaigns and performance tracking.
- Delivered a staff-facing view and a deep integration with a condominium management system, enabling rewards charges and billing to flow directly onto rent/HOA invoices and unlocking a new distribution and revenue channel.
- Translated company goals into clear technical priorities and sequencing, aligning product, engineering and business stakeholders and making build-vs-buy and vendor decisions with cost and complexity in mind.
- Mentored other leads and engineers on architecture, delivery practices and people leadership, introducing more structured feedback and coaching to improve ownership, collaboration and reliability of delivery.

AevoTech

Engineering Manager

August 2015 - March 2016 (8 months)

Greater Rio de Janeiro

I led two major initiatives at AevoTech: building robotics solutions for Oil & Gas clients and supporting new startups inside a tech venture builder, connecting engineering execution with portfolio strategy.

- Led a team of engineers developing robotics solutions for Oil & Gas companies, overseeing design, implementation, deployment and on-site testing with clients.
- Coordinated field operations and technical decisions to ensure the systems met safety, reliability and operational constraints in real production environments.
- In the venture builder, partnered with engineering leads and a Product Manager to evaluate potential startups for the portfolio, assessing fit with strategy and technical feasibility.
- Guided early product discovery and concept validation, helping founders turn ideas into first versions with clear problem statements, scope and delivery plans.
- Helped new teams establish basic operating processes (backlog, releases, communication) and supported recruitment of their initial engineering hires.

Inovare

Senior Lead Software Engineer

April 2015 - August 2015 (5 months)

Greater Rio de Janeiro

I served as a hands-on tech lead on payment and checkout systems, splitting my time between shipping code and putting structure around how work got done.

- Built and maintained core payment and checkout flows end to end (Java and C#), focusing on correctness, reliability and a smooth experience for merchants and end users.
- Reduced production firefighting by improving logging, automated tests and error handling, making issues easier to detect, debug and fix.
- Brought more structure to delivery by breaking large projects into smaller milestones, clarifying priorities and ownership, and creating simple plans the team could execute against.
- Turned client and stakeholder requests into clear written engineering requirements and lightweight documentation, which reduced churn and rework for the team.

CEPEL

Lead Project Engineer

August 2014 - April 2015 (9 months)

Greater Rio de Janeiro

I worked on CEPEL's SOMA asset-monitoring platform, which provides real-time condition monitoring and predictive maintenance for power generation units used by utilities such as FURNAS.

- Built data analysis and visualization components in Polymer, JavaScript, TypeScript and Java to improve how operators explored and interpreted asset data.
- Improved robustness and performance of SOMA, including a ~60% improvement in query performance for configuration data mapping.
- Implemented a tool to analyze the lifespan of thermoelectric turbines in Tubarão (southern Brazil), enabling vibration data acquisition for advanced diagnostics.
- Contributed to real-time monitoring and predictive maintenance for plants such as Simplício and Furnas, helping reduce downtime and optimize maintenance planning.
- Applied TDD and agile practices to increase test coverage and make deliveries more predictable and easier to evolve safely.

CPTI / PUC-Rio

Robotics Researcher

May 2010 - July 2014 (4 years 3 months)

Rua Marquês de São Vicente, 255 - Gávea, Rio de Janeiro - RJ, 22453-900

Focusing on advanced inspection technologies, quality assurance, and critical system recovery in the oil and gas sector. Key responsibilities included:

- Developing, testing, and operating underwater inspection equipment for high-reliability applications.
- Working on field operations logistics on platforms, ships, and testing sites, including embarks on P-52, P-25, and RSV Joe Griffin, where I conducted tests and homologated inspection tools.
- Analyzing riser and pipeline data and producing technical reports for clients like Petrobras and Pipeway.
- Leading the design and homologation of hardware and software projects, including the AURI (Autonomous Underwater Riser Inspector), which won Petrobras' Innovation Award.
- Ensuring quality control and resolving issues in critical systems to maintain operational integrity.

This role had a strong focus on quality assurance for systems and processes, particularly for embedded systems used in mission-critical applications. My work involved ensuring reliability and compliance in challenging environments where precision and robustness were essential.

CEPEL

Technical Researcher – Automation and Robotics (Contractor)

December 2006 - April 2010 (3 years 5 months)

Av. Horácio Macedo, 354 - Cidade Universitária - Rio de Janeiro - RJ, 21941-911

Worked as a Researcher in renewable energy projects for the Department of Specialized Technologies, contributing to key initiatives that advanced the company's capabilities in the sector. My responsibilities included:

- Developing and implementing measurement platforms for solar and wind energy in remote areas, resulting in systems that operated uninterruptedly for over 5 years in challenging environments.
- Creating analytical tools to evaluate energy performance and identify optimization opportunities, including one that reduced a 2-month process to just 1 week.

- Coordinating engineers and technicians in the development of electronic systems, leading the testing and deployment of cutting-edge tools for solar and wind systems.
- Establishing homologation processes for critical systems to ensure compliance, operational reliability, and long-term sustainability.

I also led smaller projects that delivered innovative electronic solutions, driving progress in renewable energy technologies. Additionally, I supported an initiative by Brazil's Ministry of Mines and Energy, evaluating companies, sites, and technologies to enable strategic entry into the wind energy market.

Arena Games

Technical Support Analyst

August 2005 - May 2006 (10 months)

Rio de Janeiro, Brasil

Education

Universidade Veiga de Almeida

Master of Business Administration - MBA, Business

Management · (2017 - 2018)

Pontifícia Universidade Católica do Rio de Janeiro / PUC-Rio

Bachelor's degree, Control and Automation Engineering · (2010 - 2013)

Universidade do Estado do Rio de Janeiro

Bachelor's degree, Electrical and Electronics Engineering · (2006 - 2009)

ETE Ferreira Viana (FAETEC)

Telecommunications Technician, Telecommunications Technology/

Technician · (2002 - 2005)

Free Code Camp

Full Stack Web Development Certification, Computer Software

Engineering · (2016 - 2016)
